

Prevention of unintentional shut-offs

For a universal, comfortable refuelling of motorbikes / motor scooters, passenger cars or other commonly used vehicles, ELAFLEX offers the spout ER 130 H for ZVA Slimline 2 GR nozzles.

During refuelling of motorbikes / motor scooters and open tank systems, without venting systems, the rising fuel level and foaming or splashing fuel can cause unintentional / pre-mature shut-offs.

The **special type ER 130 H** was developed to avoid this scenario and provide a smooth but safe fuelling process.

ER 130 H features an additional sensing port that is located underneath the spout tip, making it less prone to be triggered by incidental splashing or foaming fuel in the tank.

This makes the spout particularly suitable for the refuelling of motorbikes and motor scooters while remaining a safe refuelling solution for all other gasoline vehicle types.
